

Design is a collaborative process. After working together on bespoke furniture and fixings, Foster and Partners invited Trapex to collaborate on a commercially available range of architectural hardware. Working together on the new FT range of products allowed Foster and Partners and Trapex to share ideas and skills, resulting in products where the quality of design is reflected by the quality of production.

Foster & Partners

The FT range of architectural hardware expresses a single idea: matching functional ergonomic design with softened tactile surfaces. It is available in the full range of fixings, from door stops and snib turns, to drawer pulls, coat hooks, and pull handles. The formal qualities of each product is complimented by the materials it is made of, with handle surfaces that include knurled stainless steel, Leather and different colours of synthetic rubber. The range is suitable for domestic and commercial application, opening up a number of creative possibilities for designers.

see page 2 for details

The FT range of architectural hardware expresses a single idea: matching functional ergonomic design with softened tactile surfaces, including knurled stainless steel and different colours of synthetic rubber.

The Partnership:

Design is a collaborative process. After working together on bespoke furniture and fixings, Foster and Partners invited Trapex to collaborate on a commercially available range of door hardware.

The new FT range is a sharing of ideas and skills between Foster and Partners and Trapex, in which the quality of design is reflected by the quality of production.
